THE REDCLIFF REVIEW, THURSDAY, MARCH 2, 1922.

## FEED FOR HORSES NECESSARY

For some time past farmers have been complaining of not being able to get any definite information concerning the intention of the government with regard to securing the necessary feed for horses to put them in shape for the spring work.

It will be good news, therefore, to learn in this issue that Mr. Wedderburn has taken the matter up with the Minister of Agriculture, and has received the assurance that it is the wish to have this matter attended to as expeditiously as possible.

In this connection it is the wish of the Minister to secure the assistance of the officers of the several local concerns, and it is hoped they will give the matter their immediate and careful attention.

Owing to the fact that the pasture was none too good last fall and further to the heavy mantle of snow which is now covering the prairie, the horses have not wintered well and are in no shape for the spring work. It is very important, therefore, that feed be secured as quickly as possible. The government is acting wisely in rushing the preliminary work along.

## A POPULAR OBSERVATION.

F. H. Courtneil, our newly-appointed J.P., gave expression to the views of nearly everyone in town, when, in dismissing a case brought before him this week, he said it was regrettable that such trivial cases should be brought into court. He said in effect that the police court was not the place to settle petty spites.

Officers should exercise a little more judgment and should use their positions, influence and power towards keeping people out of trouble and helping to create an atmosphere of harmony and co-operation rather than getting them into trouble and causing them unnecessary worry and expense.

Goodness knows why at this particular time very few can afford to be put to any unnecessary expense. The more any one can do to help curtail expenses and bring about a feeling of harmony and hope for the future, the more he will be doing to help bring about those better conditions to which we are so anxiously looking forward.

## TREE PLANTING SUGGESTIONS

A movement is now on foot for a big tree planting program throughout Canada this coming spring. Since there is no place in Canada which is so devoid of trees as this town, and surrounding country, all concerned should make a special effort to enter into the spirit of the movement and make some showing in this direction.

So far as this town is concerned there are several plans suggested by other towns which might be of assistance to us if some definite plan of action were undertaken. One that appeals to us very strongly is being adopted by other centres. It is the selection of some particular street or park in the town and planting in it a tree for each man in the district who gave his life in the Great War. These trees are named after the men who are supposed to represent, and some individual or organization is made responsible for keeping a certain number of them alive or replacing any which may die.

In a town this size, with a Council, School Board, Churches, colleges and other organizations of various kinds, it should be as easy matter to so arrange details as not to be much of a burden to any one.

Some of the most beautifully treed streets on this continent were started in this way, and there is no reason why it should not be accomplished here. We are informed there are an abundance of young trees along the river banks south of town which would be suitable for this purpose, as they are acclimatized and rapid growers.

All that would be necessary to make this movement a success locally is, we feel sure, for some organization to assume the leadership and start the ball rolling. What body should be more interested or better qualified than our Council? It need not necessarily involve the expenditure of very much money.

## SEED PRODUCTION IN ALBERTA.

According to Dominion Experimental Farm experience at Lethbridge and Lacombe, Alberta offers splendid opportunities for seed production. In 1916 a hundred bushels of six-rowed barley was imported from the State of Idaho, where it had been grown with improvement for a number of years. Sown on a twenty-acre patch in southern Alberta it yielded 75 bushels to the acre, but at Lethbridge and Lacombe the yields of 109 and 114 bushels respectively were obtained. A well-selected United States traveler testifies that in his opinion seed of exceptional quality could be grown in Alberta, including seed wheat, oats, barley, peas, flax, rye, alfalfa, sweet clover, red clover, timothy, broom grass, western rye, and of many kinds of vegetables. It is a fact not generally known that for years past purchasers of seed oats from the middle states have made Alberta their buying ground. In the spring of last year seven seed centres for the multiplication and distribution of pure seed were established in Alberta, and have proved satisfactory. In the irrigated districts of southern Alberta, gratifying success has been achieved in the growing of seed, especially that of Alfalfa, of which the yield runs fourteen bushels to the acre.

Dr. Boyle of the Alberta University, claims that it would take eight thousand million horsepower to combat the elements of nature in order to cause a rainfall of 4 inches over an area of 100 miles. Those who saw Hatfield's little two by four "plow" which a team of Shetland ponies could run away with, will now have some idea why this rainmaker (7) was such a dismal failure here last season.

## NEW SYSTEM NEEDED.

Further proof that there is something wrong with our present system of voting is furnished as additional returns from the last general election come in.

The most convincing proof of this comes from Prince Edward Island, where the returns of the vote in that province show that there were actually more votes cast against the Liberal candidates than for them, yet these Liberal candidates made a clean sweep of the province. There were 23,960 voters elected for Liberal candidates and 23,484 voters voted Conservative or Progressive. In Nova Scotia over forty-seven and a half per cent. of the voters voted against Liberal candidates, yet here too, the Liberals swept the province. In view of these startling figures there is no doubt that under present conditions some change should be made in our present system of voting. In the past, with only two political parties appealing to the people, the present system may have been all right, but now with three and sometimes four political parties represented in a contest it is quite different and makes possible such results as above referred to.

Proportional representation is being advocated as a remedy for the situation. The Meighen government did not take kindly to that system when in power, yet they would have benefited most by it if it had been in vogue during the last election. The Progressives have proportional representation as a plank in their platform. It is hoped now that they are in power in this province, they will take steps either to give it a trial or devise some other system which will be an improvement over the present one, even though it may work to their disadvantage in some cases.

Why all this talk about hard times? Everybody is meeting expenses. No matter which way you turn you meet them.

An interesting exhibit at our fair this year would be a display of prunning hooks made from Irish shillings.

It is said that a cat has nine lives. It is to be hoped one cat in town is now on the ninth lap of its journey through this mundane sphere.

A headline in a paper says: "Germany is seeking credit." If you ask us Germany got credit for starting something that no other nation on earth would like to have charged up against it.

It would appear from newspaper reports that there is an evident feeling among members of the legislature from the northern part of the province against rendering the necessary financial assistance to the drought districts of the south for any permanent relief policy which the legislature may adopt. Members from the north should remember that the legislature has now spent more money on railroads to the northern portion of the province than has ever been spent for any cause in the south. At this particular time we cannot afford to have any feelings between north and south. All must work harmoniously together for the common good of the whole province and its people.

## SUGGEST CHANGES IN PUBLIC SCHOOL BOOKS

Elimination of many of the subjects now taught in the intermediate grades of the public schools so that there will be less waste of time in the use of such fundamental courses as reading, writing arithmetic and composition, is being recommended by the general committee on the revision of the public school curriculum, according to Dr. A. M. Scott, superintendent of schools.

## BRITAIN GOT NOTHING FROM GERMANY YET

Replying to a question in the British House of Commons, Sir Robert Horne, Chancellor of the Exchequer, said that Great Britain had not yet received a penny of war indemnity from Germany. The cost of maintaining the forces of occupation, amounting to over a thousand million gold marks had been repaid to the extent of 970,000,000 marks. Of this sum, 2,640,000 marks had been paid to Canada and Australia.

penalty of war indemnity from Germany. The cost of maintaining the forces of occupation, amounting to over a thousand million gold marks had been repaid to the extent of 970,000,000 marks. Of this sum, 2,640,000 marks had been paid to Canada and Australia.

## FELT OF GRAY WOLF SENT TO BADEN POWELL

The tell of a gray wolf, shot in a deep rare battle with a proctor of the Hudson's Bay Company, at an outpost on Lac Du Brochet, Northwest Territories, has been sent to Chief Wolf Cub Peter Baden Powell, as a present from Winnipeg district council of the Boy Scout Association. Since his 1,000 mile journey from the frozen north.

## RAILWAY PROMOTIONS

**J. P. BURNS.**  
Mr. J. P. Burns is appointed Assistant Chief of the Dept. of Investigation of the Canadian Pacific Railway, with headquarters at Winnipeg, succeeding Lieut.-Colonel William McLeod, deceased. Mr. Burns has been in the service of the Canadian Pacific as chief clerk in the Investigation Department, Montreal, having been connected with it since its inception in January, 1913. He was attached to the Montreal office as assistant to Mr. R. G. Chamberlain, chief of the investigation Dept., prior to which he was for many years private secretary to the late, Sir H. Carpenter, who was then Chief of Detectives of the City of Montreal. Previous to entering police work he was employed in various capacities with the Grand Trunk Railway System, the Boston & Maine

**A. H. CADIEUX.**  
Cadieux and the Intercolonial Railroad.  
Mr. A. H. Cadieux is appointed Assistant to Mr. R. G. Chamberlain, chief of the Canadian Pacific Investigation Dept., with office at Windsor St. Station, Montreal. Mr. Cadieux joined the service in July, 1913, as investigator in the Investigation Dept. In May, 1915, he became Inspector and in this position he goes to fill the vacancy created by the promotion of Mr. J. P. Burns. Previous to entering the service of the Canadian Pacific Railway Mr. Cadieux was connected with the Grand Trunk Railway for a number of years; he was "social agent" from 1907 to June, 1912, when he severed his connection with that railway to accept a position under Mr. Chamberlain, Chief of the Dept. of Investigation.

land to Winnipeg the skin has been treated and lined to form a rug. It is a perfect grey mottled, and said to be a very valuable.

## Wheat Board Receives Serious Consideration

While consideration of the proposal has not yet reached that stage where it is safe to give any indication of the course which may be laid down by the government, it is understood that the matter of re-establishing a Canadian wheat board has been receiving serious attention at the hands of Premier King and his colleagues. In the West the feeling is stated to be, at the present time, in favor of the re-establishment of such a board, and the cabinet is expected to reach a decision on the matter between now and the time the house meets.

Together with the question of a wheat board the matter of continuing the grain trade inquiry is understood to be under consideration. One of the suggestions which has been put forward, it is understood, is that the grain inquiry shall continue but that it will be carried on by a reconstituted board.

## Greenfield Hints at Pro. Income Tax

Premier Greenfield made an official announcement in the legislature last Thursday afternoon that he was going to turn around to the opinion "that it may be necessary in the not far distant future to impose a provincial income tax."

Mr. Greenfield made the announcement when the bill for the Education charter was put on second reading. It was a notice to the city of Edmonton members that they must as well eliminate their proposed city income tax from the bill.

The premier said the financial affairs of the province were going to show a point that a round table conference would soon be necessary to take stock of the whole situation. Dominion, provincial and municipal methods of taxation.

## PACIFIC GRAIN ROUTE WILL BE PERMANENT

Calgary grain men estimate that the total loadings of wheat via Vancouver this season will amount to approximately seven million bushels. See 'a' Calgary, Winnipeg, Chicago and New York grain men have recently been in Vancouver investigating the new channel of shipment to the United Kingdom and it is the general opinion that the new route will be permanent.

## WILL TEST CHILLED MEAT BUSINESS

William Spurrell, who was a member of the commission which investigated the chilled meat at preparation for the United Farmers of Alberta in Great Britain, states that a company will probably be organized in the spring to give a thorough test to the experiment of shipping meat in this condition.

## CAN THE DEAF BE MADE TO HEAR?

The question can be answered both ways. If the deafness is due to Catarrh, success is general if the sufferer persists in the use of the following—  
—and thereby drives Catarrh out of the system.  
—Persevering through the passages of the ear by the use of Catarrh relieves the inflammation, destroys the cause of the Catarrh and thereby allows nature to resist itself.  
—The sufferer, by the use of the medicine, perceives the eyes, plugged nostrils and other symptoms connected with Catarrh, subside. You'll try more than pleased with the quick improvement in your condition. Two months' treatment. (See Dollar ad elsewhere, or the Catarrh Cure, Co. Montreal.

## The Walls Of Jericho

Bible Has Been Sustained by Late Discoveries

The truth of various parts of the Bible narrative was demonstrated by Dr. A. T. Schofield, in a lecture at the Royal Society Institution in London, on "Recent Discoveries in Palestine."  
The story of the Gadites who were attacked years ago by Professor Huxley, who said that it could not be true because there were no ruins of the Lake of Galilee did the hills run directly down to the water. But Dr. Schofield claimed that he had seen and photographed one steep place, the foot of which was actually in the water.

How Josh captured the Jebusite stronghold of Zion in the time of David, was explained by a recent discovery. This stronghold, had held out for 400 years from the days of Joshua, and it was told that Josh got up by a gutter and took it. No one knew what this gutter was still one of our Royal Engineers, bathing in a pool at the foot of the precipitous peak of the stronghold, discovered a tunnel which led up through the heart of the rock to the top of the hill.

As to the story of the walls of Jericho falling down after Joshua's host had waited round it for seven days, he said the top of the old wall had been found in the ditch which formerly surrounded the city out side the wall. Dr. Schofield's explanation was that the walls, built only of sun-dried clay, were pushed outward by the pressure of people within the city rushing to learn the meaning of the mighty shout which the Israelites gave on the seventh day of their penetration.

A simple explanation of the drying up of the Jordan was afforded by the fact that a short distance above Jericho the river detaches from a main gorge where to this day there are frequent landslides which temporarily block the river and leave the bed dry down to the Red Sea.

Another question dealt with was: Where did Elijah get the water for which to flood the altar he built on Carmel when he confounded the priests of Baal? The answer was: there was a spring of water on top of the mount, which had never been known to run dry in the memory of man.

## Headache

Recurring headaches usually come from an enlargement of the nervous system, and they do not disappear until the vigor of the nerve cells is restored by such up-lifting treatment as, Chase's Nerve Food.

Temporary relief by use of powders is often obtained at an enormous expense to the nervous system and the general health.

Get the nerves right and the headaches will not return.

Mr. W. J. Pearce, Nunn St., Cobourg, Ont., writes:

"My system became run-down and I suffered greatly with pain in my head. This was so severe that I would have had a shock badly along my head but I could get any relief. A friend called the use of Dr. Chase's Nerve Food, and after taking the first box I found some improvement in my condition. I continued using them until I had taken about seven boxes, and they completely and built up my system, completely relieving the pain in my head."

Dr. Chase's Nerve Food, 50c a box, all dealers, or Edsonson, Bates & Co., Limited, Toronto.

W. M. U. 1409

## Unsatifactory Trade Conditions Changes Necessary in Order to Adjust Adverse Exchange

Examination of Canada's trade figures brings out a number of peculiar circumstances. First of all, the figures demonstrate that we are buying too much from the United States in comparison with their purchases from us. Secondly, while our sales abroad are in a measure increasing, we are not buying enough from the foreign countries that buy from us. Broadly speaking, this results in two sets of adverse conditions. The amount we purchase from the United States being too large results in depreciation of the Canadian dollar there. We must equalize our purchases to the basis of what they buy from us, so only by that means can the adverse exchange be adjusted. Another condition is that the ships of the Canadian Merchant Marine are at present returning from foreign ports with inadequate cargoes. It is not sufficient to load ships one way only. Return cargoes are necessary to the economical operation of ships.

The countries to which the Canadian Merchant Marine are operating—British West Indies, China, Belgium, France, Britain and South American ports—have a great variety of commodities which Canada does not, or cannot, produce herself. We must not simply sell to these people—we must "trade" with them.

The revision of our buying and selling operations on this basis would result in the advance of the Canadian dollar to par value in the United States and have a most salutary effect on the financial condition of our nationally-owned railroads and ships by directing to Canadian ports a much greater proportion of the tonnage which for years has entered and left Canada through the seaports of the United States.

## What Warships Cost

Enormous Burden Imposed on World For Upkeep of Armaments

The super-cruiser Hood, of the British navy, represents a capital cost of \$20,000,000 and requires an annual outfit of nearly \$2,000,000 for general maintenance. Her fuel and lubricant bill alone runs into hundreds of thousands. Interest on cost is joined to upkeep, the figures are really staggering; and if this enormous drain on national resources which makes disarmament imperative. An example of the gross cost of arms is the cost of defense expenditure by the United States on that account for the fiscal year ending March 30, 1920, which exceeded by nearly \$10,000,000 the regular appropriation of \$775,500,000 per annum against Germany, and which it has been agreed to reduce to \$100 million by 1925. If half the money being expended by the leading powers on their armaments could be saved, the whole financial situation in Europe would be vitally changed in ten years. In fact, unless the rivalry in sea building equipment is arrested, there is little hope of seeing the stupendous burden of taxation kept within the bearing limit. "And then what?" Ottawa Journal.

## Change Your Mind Men Should Alter Ideas to Meet Conditions

"Lloyd George" said a Chicagoan, "made a good speech at a dinner we gave him in London last season. He has been saying he was often accused of being inconsistent, of changing his mind."

"Well, he went on, 'men change their minds don't they?' We rather admire them for that. It's hygienic."

"So with the mind. As conditions change, the mind must be changed to conform" with them. Utters the man who never changes his mind. How stale and soiled and dusty such a man's mind must be! He who changes his mind to harmonize with circumstances though is spiritually clean and fresh, is living according to the laws of spiritual hygiene."

## Necklace Often Meant Diagnosis

The necklace, now an ornament, was formerly something that was a badge of disgrace, worn only by slaves as a symbol of their servitude. The possibility of the necklace for decorative purposes caused it to lose its servile significance and became an article of wear.

The chief difference between the human and that of the higher apes lies in the thumb, which is always shorter in the ape.

## Will Help Needy Farmers

Co-operate in Aiding Westerners to Recover From Losses

The financial pages of a Toronto newspaper carries the following:  
A good deal of satisfaction was expressed in local financial circles over the decision of the United Farmers of Alberta against a moratorium such as had been requested in some quarters. The move was being caused by crop failure of some parts of the province, accompanied by low prices of grain. It had been thought that the movement for a moratorium by payment of debts would be legally deferred for a year or two might have been desirable. Strongly that such a decision was not taken even by the farmers themselves or the farmers' government of the province is considered in financial circles as a reassuring attitude.

It is believed that, while distress in an acute form exists in some parts of Alberta, the actual percentage of farmers affected is not large.

It developed at the Canada Life meeting recently that representations of the survey board of Alberta in the United States are operating. The board had visited the east this winter and had conferred with the leading companies and with the bank. The board is now in a view to securing co-operation for the protection of those who are suffering most.

In some cases it is thought western farmers will require temporary aid, perhaps in a form that would be equitable to the banks and the banks; also that provisions would need to be made for need in the spring.

## Dawson Wants Wireless Stations

Claim Made Communication With North Country Not Sufficient

Establishment of wireless stations at Stewart, Atlin and Alice Arm, B.C., and Dawson and Whitehorse in the Yukon, will be urged upon the government by Frederick Stork, Liberal member for Skeena riding, he is reported recently.

In an interview, Mr. Stork stressed the need for better communication with the north country. He said the existing Yukon telegraph line is in such bad shape that its complete rebuilding at the line of the telegraph, typists, plainists—frequently suffer, is caused by overwork and infection. The overwork reduces the vitality and resistance of the nerves and their sheaths, and causes in the great majority of cases comes from rheumatism about the teeth.

This is only one of the many painful and serious derangements of your body machine that can come from diseases in the mouth.

If you owned a fine piece of machinery that got out of order, you would call in, first, a good general machanicist.

Now Swine Policy

National System of Grading Hogs for Marketing Institutions

The Dominion Department of Agriculture is taking immediate action to give effect to the national swine policy outlined at the conference of producers, packers and agricultural officials, held at Ottawa last November, according to a statement issued by the department.

All hogs marketed at public stockyards and abattoirs on and after May 1 next, will be sold according to official grades in which a minimum premium of ten per cent will be recognized for select bacon hogs. The grading will be performed under the direction of the Dominion livestock branch, according to standards acceptable to producers and the trade.

It is stated that an expert will make a special study of the bacon industry in relation to the export trade, and of the requirements of Great Britain in particular. A permanent board of trade, consisting of a representative of the packers, of the producers, and of the Dominion Department of Agriculture, is to be appointed to study the various problems relating to the production and marketing of hogs and hog products, paying special attention to supply and demand in relation to prices in the home and foreign markets. Regulations respecting the grading of hogs are now in the course of preparation.

Maybe  
"I see that your wife has promised to take the car to a repair shop, but I don't think it is the best place to take it. I think it is better to take it to the shop I mentioned."

"Yes, maybe she will, maybe she won't. She promised to obey when she married me."

## For Fifty Years

Butler's Big's Syrup has been the world's remedy for indigestion and it is still the best and cheapest of stomach and bowels. The medicinal extracts of varied roots, bark and other herbs, the natural efficacy of the ingredients and it has balanced sometimes cases of pain, after eating, headaches, flatulence, indigestion, and constipation. Sold in 50c and \$1.00 bottles at drug stores.

## "YOUR TEETH"

THE HUMAN MACHINE

By REA PROCTOR MOORE D.D.S., M.D., Editor of "Dental Hygiene"

Have you ever considered what a remarkable machine you are?

Think of the wonderful mechanism of your hand, your wrist, your arm, your neck, your head, your teeth, the slender tendons, the rigid bones, the delicate nerves, the efficiently distributed arteries and veins. All of these and the rest of your marvelous body do their work at your slightest thought.

In addition to all of this, your body machine repairs nearly all of its own injuries, takes care of its own growth, and keeps itself in order. Nature makes a complete effort to provide you with a perfect means to carry on your business and to enjoy the pleasures of life.

In order for your body to do these things it must have fuel in the shape of food and it is up to your mouth to receive and prepare this fuel. If your food is of the very purest and most appetizing variety, carefully prepared and tastefully served, it would seem that that would be all that is necessary.

But if that same pure food is placed in an infected mouth and is then thoroughly corrupted, by having mixed with it many types of bacteria and of the poisons resulting from bacteria, would it not seem that the damage to your system would be very serious?

The condition known as scurvy, from which many people who use their hands in highly trained work, such as telegraphers, typists, plainists—frequently suffer, is caused by overwork and infection. The overwork reduces the vitality and resistance of the nerves and their sheaths, and causes in the great majority of cases comes from rheumatism about the teeth.

This is only one of the many painful and serious derangements of your body machine that can come from diseases in the mouth.

If you owned a fine piece of machinery that got out of order, you would call in, first, a good general machanicist.

and then men especially skilled in the various parts of the machine that required special training to understand properly.

Why not be as careful of your own body? The mechanical principles upon which you are built and by which you live are just as true as those upon which you run your automobile. But as your body is the most complicated machine with which you will ever come in contact, it requires a very high order of intelligence in the "garage man" to diagnose your troubles.

But no diagnosis is considered complete these days without the advice of a specialist upon the mouth—the dentist.

## Pasting of the Clay Pipe

Old-time Pipe is Becoming Extinct in England

The clay tobacco pipe familiar to many generations, is passing in England. The wooden pipe and greatly increased cost of clay are said to have killed the industry.

Preparations have been made for the closing down at Bristol, after an existence of 200 years, of a firm engaged in the making of these pipes and believed to be the oldest house in this country, if not in the world. Many years ago there were 14 manufacturers of clay pipes in one part of Bristol. One by one they have dropped out.

The Boss is Married  
"Who is it?" barked the boss. "Guess who," cooed a feminine voice over the phone. "My guessing days are over, wink. I'll call one of the junior clerks."—Film Fun.

Developing Grain of Wheat

In One Year a Single Grain Produced 322,000

An experiment to show the fecundity of a grain of wheat has just been concluded at the Official School of Agriculture at Valladolid, Spain, with the result that one grain produced in a year 322,000 grains.

At the end of July 100 grains were sown separately. At the end of September the grains had developed an average of 12 shoots each. These were cut and transplanted and by the end of October each cutting furnished an average of eight shoots, which produced sixty-five ears each, and each ear gave an average of fifty grains.

A simple multiplication sum shows that each of the original grains planted produced itself 32,200 times in 65 days, making a total of 322,000 grains.

The Boss is Married  
"Who is it?" barked the boss. "Guess who," cooed a feminine voice over the phone. "My guessing days are over, wink. I'll call one of the junior clerks."—Film Fun.

**CLARK'S**  
**CORNEA BEEF**

A good nourishing food, ready to serve and inexpensive. Try it cold, hot in slices and serve with fried eggs instead of ham. No bones, no gristle. The Government guarantees of purity. Clark's Good Things are made from Canadian produce and sold everywhere in Canada.
